

Advanced Trade API Endpoints

The Advanced Trade API lets you manage orders, portfolios, products, and fees with our new `v3` endpoints. For core Coinbase functions for account deposits, withdrawals, and transaction, you will still need [Coinbase App API](#) `v2` endpoints.

 **Most `v3` endpoints require authentication unless otherwise noted**

The [Advanced Trade REST API](#) comprises all `v3 endpoints`. It does not duplicate the Coinbase App `v2` endpoints for core Coinbase functions (some of which need authentication as well).

Advanced Trade Endpoints

Advanced Trade endpoint URL: `https://api.coinbase.com/api/v3/brokerage/{resource}`

Private Endpoints

Consult the [Authentication guide](#) for more information on CDP API keys.

API	Method	Resource	API Key Permission
List Accounts	GET	<code>/accounts</code>	<code>view</code>
Get Account	GET	<code>/accounts/:account_id</code>	<code>view</code>
Create Order	POST	<code>/orders</code>	<code>trade</code>
Cancel Orders	POST	<code>/orders/batch_cancel</code>	<code>trade</code>
List Orders	GET	<code>/orders/historical/batch</code>	<code>view</code>
List Fills	GET	<code>/orders/historical/fills</code>	<code>view</code>
Get Order	GET	<code>/orders/historical/{order_id}</code>	<code>view</code>
Preview Orders	POST	<code>/orders/preview</code>	<code>view</code>
Get Best Bid/Ask	GET	<code>/best_bid_ask</code>	<code>view</code>
Get Product Book	GET	<code>/product_book</code>	<code>view</code>
List Products	GET	<code>/products</code>	<code>view</code>
Get Product	GET	<code>/products/{product_id}</code>	<code>view</code>
Get Product Candles	GET	<code>/products/{product_id}/candles</code>	<code>view</code>
Get Market Trades	GET	<code>/products/{product_id}/ticker</code>	<code>view</code>
Get Transactions Summary	GET	<code>/transaction_summary</code>	<code>view</code>
Create Convert Quote	POST	<code>/convert/quote</code>	<code>trade</code>

Create Convert Quote	POST	/convert/quote	trade
Commit Convert Trade	POST	/convert/{trade_id}	trade
Get Convert Trade	GET	/convert/{trade_id}	view
List Portfolios	GET	/portfolios	view
Create Portfolio	POST	/portfolios	view (any portfolio)
Move Portfolio Funds	POST	/portfolios	transfer (for source portfolio)
Get Portfolio Breakdown	GET	/portfolios	view (for that portfolio)
Delete Portfolio	DELETE	/portfolios	trade (for that portfolio)
Edit Portfolio	PUT	/portfolios	trade (for that portfolio)
Get Futures Balance Summary	GET	/cfm/balance_summary	view
List Futures Positions	GET	/cfm.positions	view
Get Futures Position	GET	/cfm/positions/{product_id}	view
Schedule Futures Sweep	POST	/cfm/sweeps/schedule	transfer
List Futures Sweeps	GET	/cfm/sweeps	view
Cancel Futures Sweep	DELETE	/cfm/sweeps	transfer
Get Intraday Margin Setting	GET	/cfm/intraday/margin_setting	view
Set Intraday Margin Setting	POST	/cfm/intraday/margin_setting	trade
Get Current Margin Window	GET	/cfm/intraday/current_margin_window	view
Get Perpetuals Portfolio Summary	GET	/intx/portfolio	view (for intx portfolio)
List Perpetuals Positions	GET	/intx/positions	view (for intx portfolio)
Get Perpetuals Position	GET	/intx/positions	view (for intx portfolio)
Get Perpetuals Portfolio Balances	GET	/intx/balances	view (for intx portfolio)
Opt-In Multi Asset Collateral	POST	/intx/multi_asset_collateral	trade (for intx portfolio)
Allocate Portfolio	POST	/intx/allocate	transfer (for intx portfolio)
List Payment Methods	GET	/payment_methods	view

List Payment Methods	GET	<code>/payment_methods</code>	view
Get Payment Method	GET	<code>/payment_methods/{payment_method_id}</code>	view
Get Api Key Permissions	GET	<code>/key_permissions</code>	view

Public Endpoints

Public endpoints do not require authentication.

💡 Tip

1s cache is enabled for all public endpoints. If you need real-time data, please choose one of the following options:

- Use the [WebSocket](#) (recommended as this will provide the fastest product and market trades updates).
- Set `cache-control: no-cache` header on the API requests to bypass caching.
- Use the authenticated endpoints.

API	Method	Resource
Get Server Time	GET	<code>/time</code>
Get Public Product Book	GET	<code>/market/product_book</code>
List Public Products	GET	<code>/market/products</code>
Get Public Product	GET	<code>/market/products/{product_id}</code>
Get Public Product Candles	GET	<code>/market/products/{product_id}/candles</code>
Get Public Market Trades	GET	<code>/market/products/{product_id}/ticker</code>
